CaptiveAire Continues to be the “Best in Class”

RALEIGH, NC (December 15, 2009) – For the ninth year in a row, CaptiveAire, Inc. is the nation’s “Best in Class” commercial kitchen ventilation manufacturer. This award is based on votes by industry kitchen equipment dealers, consultants and operators and is featured in *Foodservice Equipment & Supplies* magazine.

This year, CaptiveAire released the Indirect Fired Bent Tube Heater (IBT), the Modular Package Unit (MPU) and the SCS control panel. The IBT provides clean and tempered makeup air and prevents combustion fumes from entering the air stream. The MPU offers air conditioning and heating for 100% Outdoor Air applications. The SCS panel provides plumbing and electrical controls for self cleaning hoods that do not allow for a utility cabinet at the end of the hood. All of these solutions have been engineered with sustainability and cost effectiveness in mind.

CaptiveAire’s integrated kitchen ventilation packages include hoods, exhaust fans, electrical controls, direct-fired heaters, pollution control units and utility distribution systems. CaptiveAire’s clients include independent restaurants, national chains, and other public and private institutions.

CaptiveAire, the nation’s largest and most widely respected manufacturer of commercial kitchen ventilation equipment, runs five manufacturing plants including our newest plant in Bedford, Pennsylvania. Sixty sales and engineering offices across the United States and Canada provide local service as well.
